

CASE STUDY: CHEMICAL INDUSTRY

Project Summary - Complete site clearance to slab, following the dismantling to allow re-sale of reserved plant.

Groundwork investigation and making safe of site to minimise H&S liabilities.

Actions taken:

Confirmation of plant isolation to allow the removal of reserved items prior to demolition.

Supervision of crane (appointed person) for removal and loading of storage tanks, bitumen oxidiser and incinerator unit.

Demolition of storage tanks and associated pipework, minimising environmental impact through control of waste streams.

Coordination of demolition of brick (boilerhouse) chimney by explosives.

Assistance in site groundworks assessment.

Decontamination and removal of underground storage tanks.

Levelling of site to leave in safe and secure condition.
