

CASE STUDY: CHEMICAL INDUSTRY

Project Summary - Complete site clearance of redundant tanks, located within a live storage facility.

Groundwork investigation and making safe of site to minimise H&S liabilities.

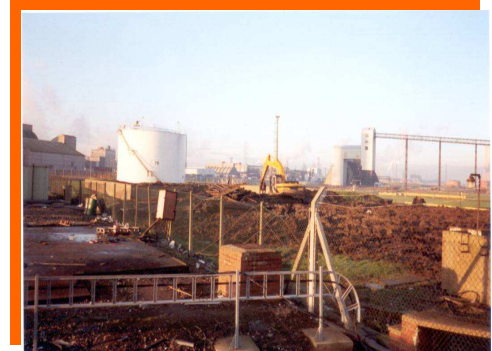

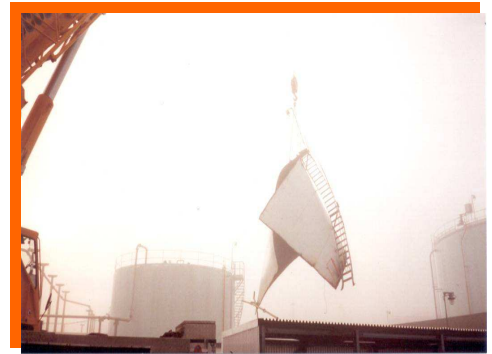

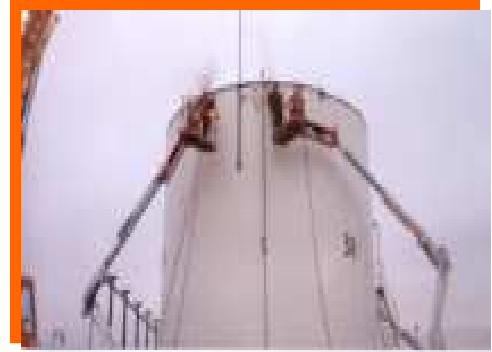

Actions taken:

Confirmation of plant isolation to allow the dismantling of redundant tanks.

Supervision of crane (appointed person) for the dismantling of storage tanks.

Demolition of storage tanks and associated pipework, minimising environmental impact through control of waste streams.

Removal of piled tank bunds to allow the site to be levelled and left in a safe and secure condition.
