

# CASE STUDY: Butane Tank Dismantling

## Project scope:

The dismantling, removal and disposal of two redundant Butane storage vessels.

## Actions taken:

Following a project assessment, B.D.B's in house project planner produced site and project specific Risk Assessments and Method Statements for the client's approval.

Isolations were inspected and gas free monitoring was undertaken to confirm certification received.

The tanks were processed into plate of a predetermined size for resale, thus maximising credits available to the client.

## Resolution:

The removal of the redundant tanks reduced the rateable value of the site and, in addition, created additional storage room.
